Supports PC mainstream racing games.
Requirements (PC): Windows10, 50 MB free hard disk space, USB 2.0 port.

Use the installation instructions

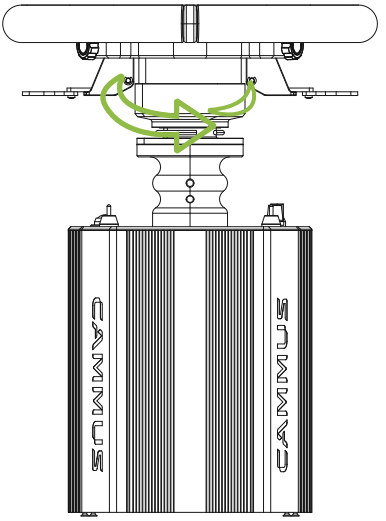

Installation steps: Align the four parts according to the order of the decorative plate,steering wheel, HUB, and quick-release modules, and then screw on the screws (M6*45mm).

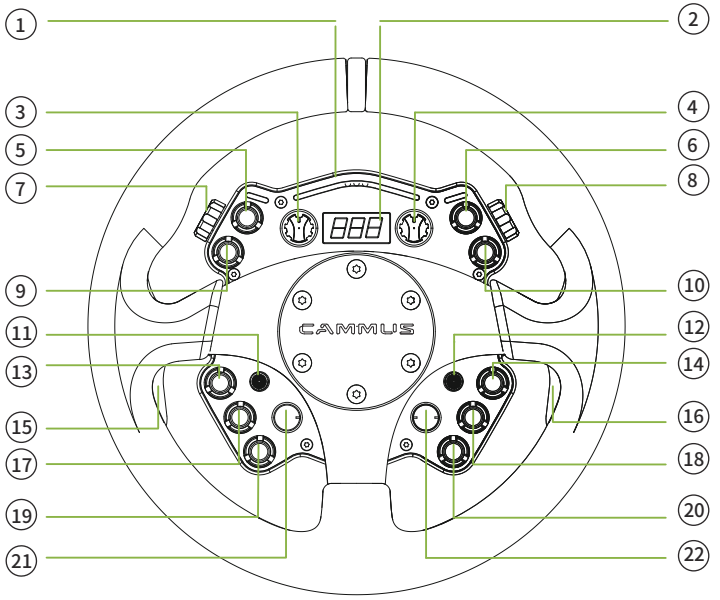

Install the steering wheel to the base: hold the quickrelease sleeveportion, put the sleeve into the wheelbase base shaft, release the sleeve, and the sleeve will fall automatically.

To secure the steering wheel: Hold the front of the base and rotate the steering wheel until it clicks and locks.

Steering wheel front interface details

For interface details,refer to the drawing description,as shown in the figure;

①:LEDspeed light ②:Speedometer

③④:12- speed knob ⑦⑧㉑㉒ :Encoder

⑤⑥⑨⑩⑬⑭⑰⑱⑲⑳:Ten function key buttons

⑪:3D Joystick ⑫ :Direction rocker ⑮⑯ :Paddle

Press and hold the upper encoders ⑦ and ⑧ at the same time for 3-5 seconds. If successful,there will be two beeps. After that, you can use the CAMMUS APP to connect via bluetooth, enter the channel setting mode, and communicate with the installation base.

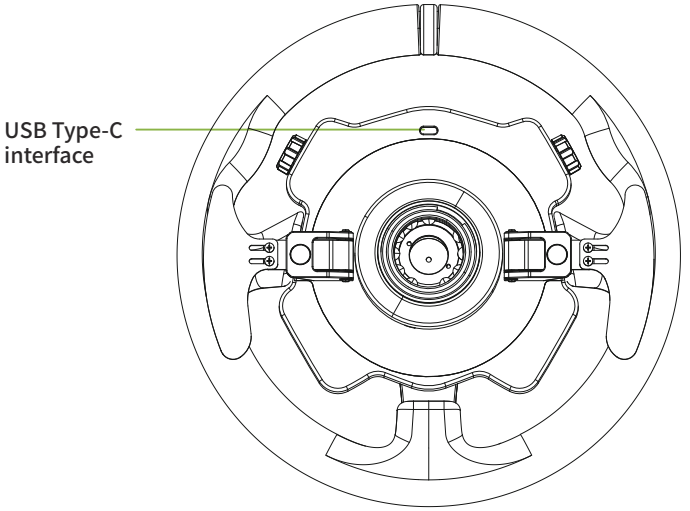

Press and hold the rotating，knobs ⑪ and ㉒ at the same，time for 3-5 seconds. After success, there will be two beeps, and the USB_Dongle and dock connection modes can be switched. If the switch is successful, the steering wheel HUB will automatically restart, and the LED lights at the left and right ends of the top will flash (the middle light will go out after three flashes).Flashing orange means it is connected to the base, and blue means it is connected to the USB_Dongle.

At the same time, press and hold the upper encoder ⑤ and ⑦ for 3-5 seconds, there will be a beep after success, and the 12-speed knob ② can be switched to the up/down mode.

At the same time, press and hold the upper encoder ⑯ and ⑱ for 3-5 seconds, there will be a beep after success, and you can switch the 12-speed knob ⑬ to the up/down mode.

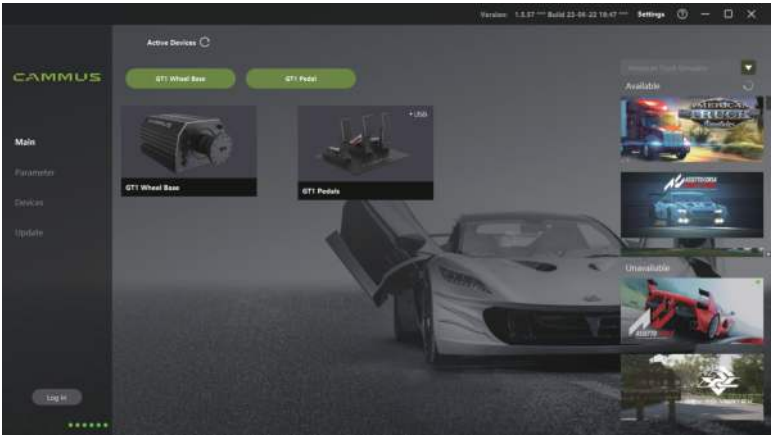

Note: None of the function keys have preset functions, please use them after customizing the functions in the game.

Interface: 1 in total, see the figure below for details.

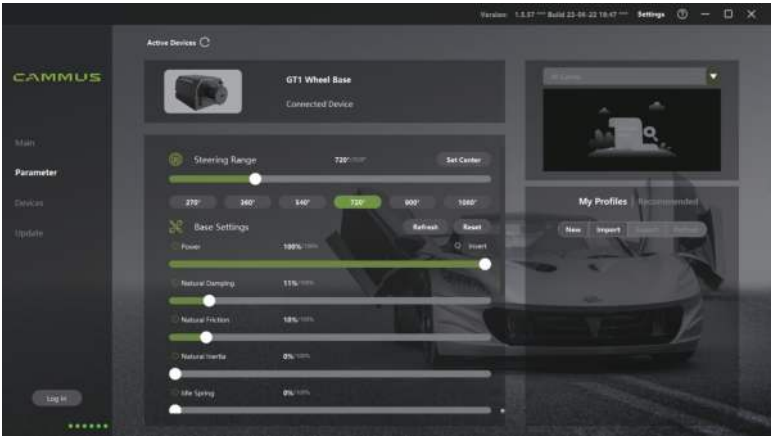

USB Type-C interface：It can be connected to a computer directly to use with other bases,or connected to a computer to upgrade the firmware of the steering wheel through the CAMMUS app.

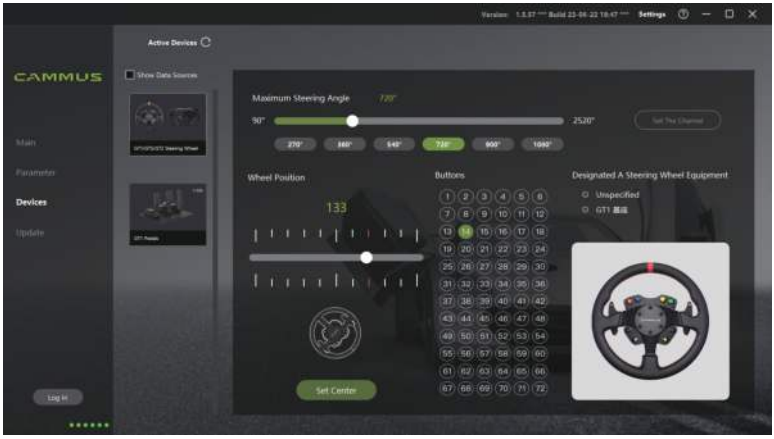

Software Introduction

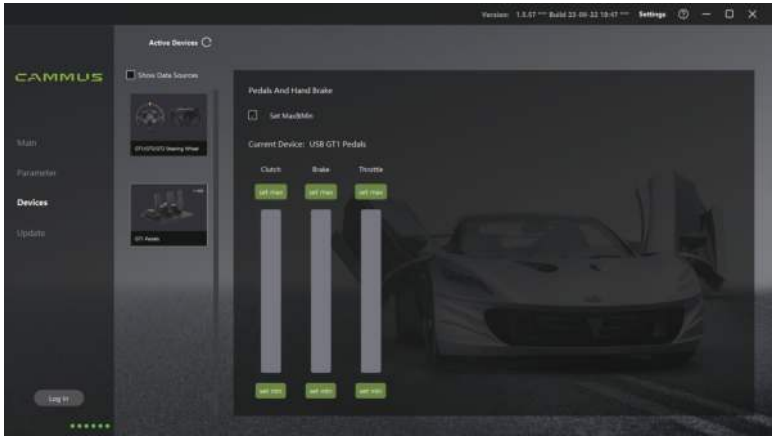

Homepage: You can check the connection status of each device, quickly start the game, and upload personal practice results data at the same time.

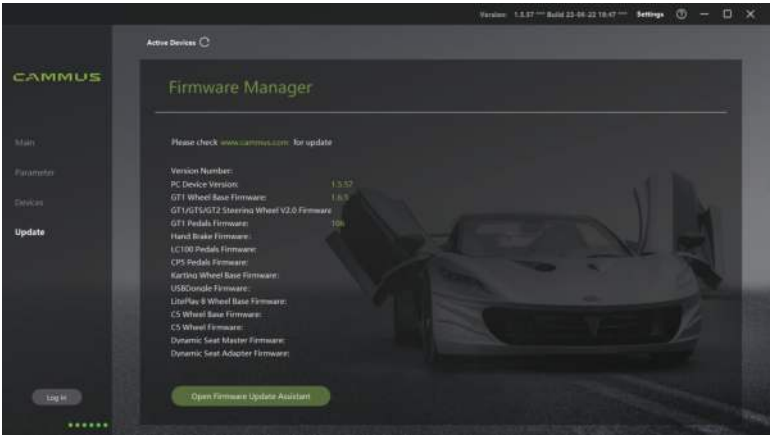

Parameters: Base setting interface, including basic settings of the base and game effect settings. Beginner players can quickly match the appropriate feel to play the game by adjusting the basic settings. After getting familiar with it, they can adjust the exclusive force feedback effect by making advanced game effect settings.

Equipment: Check the status of all CAMMUS equipment, including the settings of the handbrake, steering wheel, pedals, motionrig, etc.

Set the maximum/minimum value of the pedal: Enter the pedal setting interface, click the minimum value of the accelerator, and wait for the prompt to set the function. At this time, step on the accelerator fully, hold it and click the maximum value until the prompt setting is successful; the same is true for brakes and clutches.

Firmware upgrade: You can view the firmware version of the existing device. Open the firmware update assistant to quickly update to the latest firmware of the device with one click.
