## Thread Depth Indicator

1. Insert the thread depth indicator (supplied) through the thread inserts found on the back of the flat panel to make sure the inserts measure the same full depth and mark it (Figure 1).
2. Locate the correct diameter screw for the thread insert. Compare your marking to the screws (supplied).
3. If your selected screw is longer than the marking on the thread depth indicator, DO NOT USE this screw.
4. The screw length must not bypass the marking. Select another screw size (Figure 2 and 3), until you find one that comes closest to your mark without going past.

## Mount Installation

### Step 1

Determine where the mount location will be. Use a stud finder to locate the nearest wall stud.

### Step 2

Once the stud has been located, use a pencil to mark the spot.

### Step 3

Using a 1/4" drill bit, drill the upper mounting hole where the mark was made.

### Note

For ease of installation, it is recommended that two people perform the installation. One person should hold the mount while the other person installs the lag bolt and washer. Making sure that the mount is level, the person not holding the mount must mark and drill the second mounting hole and secure the second lag bolt and washer.

### Step 4

After the holes have been pre-drilled, line up the mounting slot openings with the pre-drilled holes.

### Step 5

Insert two (2) 5/16" x 3" lag bolts and washers into the mounting holes and tighten (see WARNING: below

### Step 6

Place a level (supplied) on the top rail and make sure that the mount is level. Once the mount is level, Drill pilot holes in the lower mounting slots and install two (2) 5/16" x 3" lag bolts and washers into the mounting holes and tighten.

### WARNING

Do NOT over-tighten lag bolts when attaching the mount to the wall. Improper installation may result in personal injury or damage to property.

### Note

If the studs are 12" (304.8mm) apart, use three (3) 3" (76.2mm) lag bolts for the top rail and three (3) 3" (76.2mm) lag bolts for the lower rail. If the studs are 16" (406.4mm), 18" (457.2mm) or 24" (609.6mm) apart, use two (2) 3" lag bolts for the top rail and two (2) 3" lag bolts for the lower rail.

## Concrete Mounting

**Note** Concrete anchors must be used for concrete installation. They can be purchased at your local hardware store. The mounting surface must be a minimum 6" thick.

1. Begin by placing the mount into position against the wall, keeping it level.
2. Mark off four holes to be used for securing the mount.
3. Next, drill holes using a masonry bit for your anchors (recommended masonry bit).
4. Insert a commercially available concrete anchor into each hole (recommended 3/8" wedge anchors).
5. If necessary, a hammer can be used to lightly tap each anchor into place so that they are flush with the wall.
6. Once all of the anchors are in place, move the wall bracket into position.
7. Attach the nut onto the threaded shaft that is protruding from the wall.
8. Do not tighten until all nuts are in place.

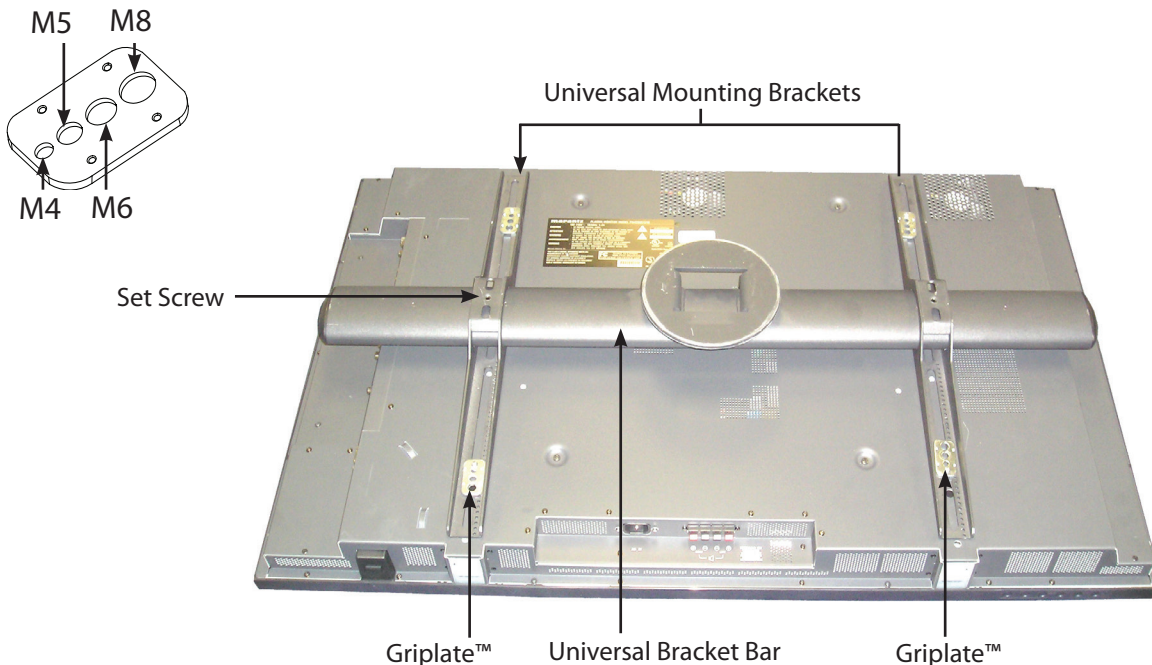

## Universal Mounting Bracket Assembly

1. Place the universal bracket bar and the universal brackets on a flat surface.
2. Slide the universal brackets onto the universal bracket bar (as shown below) with the set screws facing up. At this time, do not tighten the set screws that are located on the universal bracket.
3. Place the display on a soft, flat surface, face-down. Next, place the universal bracket assembly on the back of the display, with the universal brackets resting directly over the display mounting points.
4. Once the desired position has been determined, place the Griplate™ washers over each mounting point and secure them using the appropriate hardware (see Page 5).

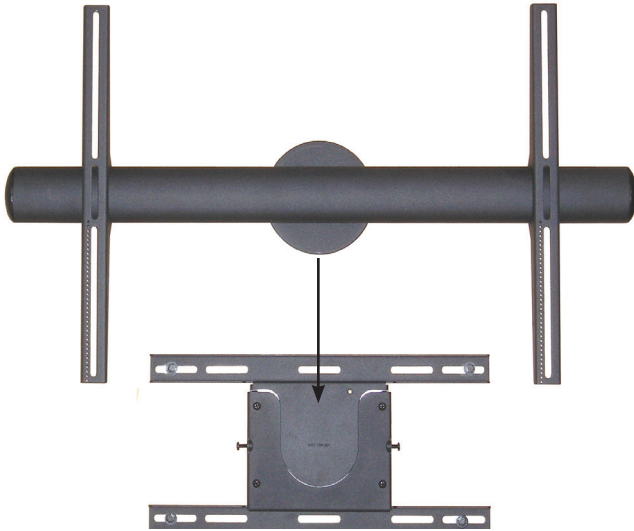

**Note** For the two upper mounting points, the Griplate™ flat side must be facing up. For the two lower mounting points, the Griplate™ flat side must be facing down.

5. At this time, center the universal bracket bar and tighten the set screws that are located on the universal brackets.

**WARNING** IT WILL TAKE TWO PEOPLE TO COMPLETE THE NEXT INSTALLATION STEP.

6. Lower the universal bracket bar with attached display into the cradle (as shown to the left).

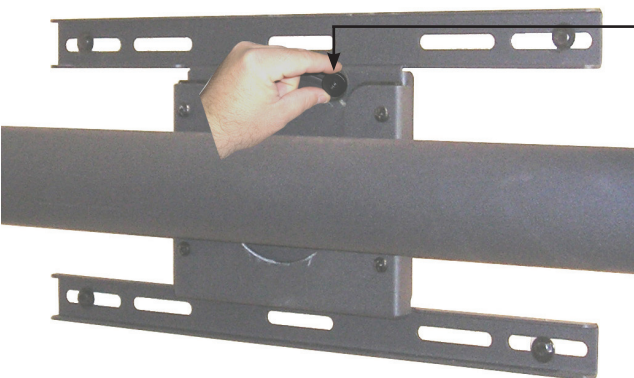

Nylon Sleeve

**Note**

After loosening the tension bolts, be sure that the nose piece is held together tightly before rotating.

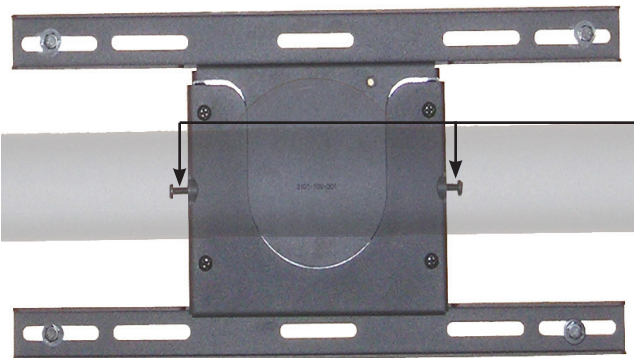

Knurl Knob Mounting Point/M6 x 12mm Security Head and M6 Lock Washer Mounting Point.

7. Insert an M6 Knurl Knob/M6 x 12mm Security Head and M6 Lock Washer into the knurl knob/security screw mounting point and tighten.

**Note**

To access the knurl knob/security screw location while the display is attached, the PFW 6854 must be rotated to the "portrait" position (vertical position)

8. Tighten the two (2) Phillips head screws (located on the side of the mounting block) once the final position is attained.
