

Vintage PWR 1959

The 1959 Eltax Vintage PWR loudspeaker takes a nostalgic look back of the imposing monitoring loudspeakers of the 1970s.

It adopts a retro and endearing aesthetic code. But beyond its aesthetic appeal, the sound pleasure comes first.

This 3-way bass reflex front loaded loudspeaker is equipped with a new 38cm diameter cellulose bass driver, a 16cm diameter cellulose midrange and two horn tweeters with 25mm diameter dome. The cabinet benefits from multiple reinforcement braces including the rigid enclosure of the midrange drive unit.

With high sensitivity and very large power handling, This Eltax loudspeaker explores the low register with impact down to the lowest frequencies, supported by the accuracy of its midrange and the effortless clarity of its treble, allowing the listener to experience all the dynamic of music like any live concert.
