

Beyond watching

Screeneo S6

With an incredible 8.3 million pixels (4K), the *Screeneo S6* delivers home theatre with impeccable precision and detail. With up to 1,600 color lumens and HDR10, movies and TV shows come to life with pitch-perfect colors and stunning highlights. No need for extra sound devices, the perfectly tuned stereo speakers ensure a clean, surround and diving bass sound. The *Screeneo S6* has been meticulously crafted with sleek and lightweight materials. The two lateral aluminium grids give a premium look as well as a smart cleaning filter system. Stream content, devour TV shows, and share all your pictures directly to the *Screeneo S6* thanks to embedded Wi-Fi and Bluetooth. Packed with a super-powered CPU, the *Screeneo S6* becomes the ultimate 4K home-theatre projector for cinema addicts.

- Up to 1,600 color lumens
- 4K Resolution and HDR
- Wi-Fi Miracast and AirPlay compatible
- Perfectly tuned built-in stereo speakers
- Bluetooth speakers
- Auto Zoom and Keystone
- Up to 45-degrees horizontal angle

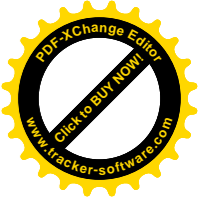

16.53" (42 cm)

Ultra-Short Throw

Enjoy a giant screen even in a small room. Just set the *Screeneo U3* away to get a big picture, or move it back for an even larger image. Get a 120" screen (305 cm) from less than 16.53" (42 cm) from the wall.

Experience Glossary

4K

4K Ultra HD provides 4 times as many pixels as Full HD 1080p. That's 8.3 million on-screen pixels (3840x2160) bringing pitch-perfect clarity to every scene with thrilling detail, color and contrast.

Full HD 1080p

Perfect for watching Blu-ray movies, HD live TV and playing video games, the 1080p resolution gives you sharp and detailed images from HD content without downscaling or compression.

Capable of receiving and displaying HDR images, our HDR-compatible projectors allow you to see far more detail and texture for lifelike images with a greater sense of depth.

We use a perfectly tuned Philips UHP Image Life lamp combined with high-quality-glass lenses, and an advanced double-mirror system to ensure an impressive image, sharpness, color, and contrast.

FlowMotion

We use advanced motion-compensated frame-rate conversion to ensure smooth and crisp projection during action scenes.

NaturaColor

It enhances even more the accuracy of the color range and accuracy to express true images, just like the filmmakers intended.

AirMote

Intuitive remote control by pointing or using gestures to pick and choose what you want to watch.

Texas Instruments engines bring better brightness, contrast and colors to your images.

Our High-Definition Multimedia Interface compatible devices bring more connectivity and versatility.
